SUMMARY

Accessibility-focused UX Designer with a deep commitment to ethical and inclusive design. I bring 12 years of experience bridging the gap between technical compliance and design execution through cross-functional mentorship, developer collaboration, and rigorous system governance. Recognized for coaching and empowering high-performing teams, creating scalable resources and review frameworks, and building systems that elevate quality without slowing teams down.

PROFESSIONAL EXPERIENCE

Senior Associate Technical Consultant SAS, Americas Consulting

July 2023 – Present

- ◆ Developed a suite of 8 VA dashboards for a multi-trillion dollar U.S. Coast Guard portfolio, establishing a custom design system by synthesizing agency styles into standardized UI patterns. Ensured WCAG and ADA compliance by implementing weekly accessibility checkpoints with end users to validate high-contrast color palettes and typographic clarity.
- ◆ Facilitated an iterative UCD process by transforming rapid prototypes into final products through weekly stakeholder feedback. Provided UI training to bridge technical gaps, increasing end-user confidence and accuracy when briefing senior leadership on mission-critical financial data.
- ◆ Designed the FUI List component and ruleset, translating UI patterns into production-ready code through software developer collaboration. Authored component specifications and interaction rules to mandate standards and brand alignment across SAS product interfaces.
- ◆ PM for 2 Data for Good initiatives, leading teams of 12, implementing UX design and prioritizing accessibility. Facilitated bilingual communication (Spanish/English) with the International Organization for Migration, analyzing data for 58,000 migrants to improve resource access and partnered with NPower, analyzing 7,000 students to drive strategies for increased job placement.
- ◆ Selected for the 5-month Technical Enablement Academy, gaining proficiency in SAS Foundations, Data Management, Visualization, and Linux/Kubernetes. Integrated design heuristics and accessibility standards into all project deliverables and presentations, resulting in a peer-voted "Most Valuable Player" award for excellence in execution and usability.

Graduate Student Intern SAS, USPS Consulting

May 2022 – June 2023

- ◆ Directed a user-centered design process to launch a project intake system for 700+ consultants, leveraging the Microsoft Power Platform to transform complex manual requests into a streamlined digital product. Executed a comprehensive UX lifecycle including personas, journey mapping, information architecture, and wireframing; validated designs through iterative high-fidelity prototyping and usability testing to optimize the end-user experience.
- ◆ Orchestrated a robust technical ecosystem by integrating SharePoint data structures with Power Automate logic to facilitate real-time collaboration and automated multi-tier approval workflows. Ensured systemic accessibility by auditing and implementing WCAG standards, specifically focusing on color contrast, semantic structure, and typographic readability.
- ◆ Spearheaded the organizational rollout by facilitating interactive 'Lunch & Learn' sessions and conducting executive-level demonstrations for the VP of Consulting and senior management. Leveraged stakeholder feedback to perform iterative refinements prior to launch, ensuring the final product aligned with strategic business objectives and senior leadership requirements.

Plans and Operations Officer U.S. Army, 82nd Airborne Division

May 2018 – May 2020

- ♦ Managed design quality and standards for 50+ stakeholders responsible for daily intelligence briefs to the executive leadership of a 22,000-person organization. Facilitated office hours and critiques to resolve complex visualization challenges, implementing standardized checkpoints and self-service resources to ensure a unified, scalable framework for mission-critical decision-making.
- ♦ Facilitated cross-team workflows and prototyping for international digital simulations with UK, German, and Canadian partners. Conducted scenario walkthroughs to identify systemic failure points and iterate on information architecture; delivered UI training that directly increased task completion rates from 40 to 80% and reduced operational friction.

Provost Marshal U.S. Army, 3rd Brigade, 82nd Airborne Division

Mar 2017 – May 2018

- ♦ Developed a modular component library and template system adopted by three organizations consisting of 18k personnel. Ensured alignment with rigorous organizational doctrine (Army Design Methodology), applying systematic standards for typography, iconography, and information hierarchy. Refined the system through iterative user feedback to ensure the same level of compliance and usability expected in enterprise design systems.
- ♦ Scaled an enterprise emergency system for 6,000+ users. Synthesized complex requirements into journey maps, task flows, and decision trees to standardize unified SOPs. Produced high-density cognitive aids and led cross-functional training, securing a "Superior" rating in external validation for usability and operational compliance.
- ♦ Directed a 100-person team overseeing system-wide data synthesis and visualization. Orchestrated the transition from manual whiteboards to accessible digital dashboards, standardizing decision-making frameworks for senior stakeholders. Awarded the Army Achievement Medal for excellence in mentorship and process implementation.

Executive Officer, Commander U.S. Army, 108th Military Police Company

Feb 2016 – Mar 2017

- ♦ Elevated an undervalued and sidelined discipline into a mission-critical strategic asset by advocating for its systemic impact to senior leadership; repositioned the team from ancillary 'support-only' tasks to leading high-priority operational objectives, securing executive buy-in and demonstrating the ROI of specialized skills through 90%+ ratings on compliance evaluations.
- ♦ Engineered a suite of decision-support tools and centralized documentation including logic trees, process flows, and dashboards to manage a \$34M portfolio of complex systems. Iterated on these through recurring user feedback loops to maintain 96% or higher organizational readiness, ensuring all personnel, equipment, and performance targets met stringent compliance standards.
- ♦ Directed operational governance and resource allocation for a 180-person organization, translating complex regulatory requirements into actionable roadmaps. Synchronized multi-discipline execution across 10 stakeholder groups to maintain a consistent cadence of delivery and compliance under high-stakes timelines.

Platoon Leader U.S. Army, 21st Military Police Company

Jul 2014 – Jul 2016

- ♦ Authored doctrine and architected a Refugee Evacuation Operations framework from the ground up, partnering with UN officials and government stakeholders to translate human-rights and safety requirements into scalable, role-based guidance (journey phases, handoffs, and decision trees); iterated through 3 major readiness exercises and applied in real-world operations processing 12,000+ Afghan evacuees at Fort McCoy, WI.
- ♦ Led a 42-person rapid-response team with an 18-hour global deployment requirement and accountability for a \$6M+ asset portfolio; translated complex requirements into standardized guidance and decision frameworks using a repeatable planning/execution methodology, embedding checkpoints that improved reliability under tight timelines; contributing to the company being awarded as the top Military Police company out of 140 in the U.S. Army for 2015.

EDUCATION

DePaul University, Chicago, IL

July 2023

Master of Science, Human-Computer Interaction
Upsilon Pi Epsilon (4.0 GPA)

Virginia Military Institute, Lexington, VA

December 2013

Bachelor of Arts, International Studies and Political Science
Minor, Writing
